ABOUT ME

AI enthusiast with hands-on experience in Python and foundational knowledge of machine learning concepts. Skilled in working with data, performing analysis, and building basic models. Actively developing projects and exploring tools used in AI and data science.

EDUCATION

BACHELOR OF ARTIFICIAL INTELLIGENCE(AI)

University Of Mumbai
VES College of Arts, Science and Commerce
CGPA:9.33
Expected Graduation: 2026

HIGHER SECONDARY

V.Z Vaze College of Arts, Science and Commerce
67%
2024

SECONDARY SCHOOL

S.B.M Padwal Vidyalaya
91.80%
2022

WORK EXPERIENCE

AI/ML Intern
Corizo (Remote)
May 2025 - June 2025

- Gained hands-on experience in fundamental AI and machine learning concepts, including supervised learning and model evaluation techniques
- Worked with Python libraries such as NumPy and pandas for data preprocessing, data cleaning, and exploratory data analysis
- Developed a Heart Disease Prediction model using machine learning algorithms to analyze patient data and predict the likelihood of heart disease
- Applied algorithms such as Logistic Regression, KNN, and Decision Trees for model building and comparison
- Analyzed datasets to identify patterns and derive meaningful insights using data-driven approaches Small improvement tip

Technical Skills

Programming Languages: Python, Java (Intermediate), C

Web Technologies: HTML, CSS

Libraries: NumPy, pandas, Matplotlib, Seaborn

Machine Learning Algorithms: Linear Regression, Logistic Regression, K-Nearest Neighbors (KNN), Decision Trees, Random Forest

AI & Machine Learning: Supervised Learning, Unsupervised Learning, Generative AI (Basics)

Data Analysis: Data Preprocessing with Python, Exploratory Data Analysis (EDA)

Frameworks & Tools: Scikit-learn, Streamlit

Database: SQL, Oracle

Tools & Technologies: Excel, Microsoft Word

Projects

- **Student Placement Analysis (Mar 2026)**
  – Analyzed placement data using Python (pandas, EDA, visualization) and built ML models to predict placement outcomes
- **COVID-19 Data Analysis & Dashboard (Aug 2025)**
  –Built interactive dashboard using Streamlit, Plotly; performed EDA and basic time-series forecasting
- **Heart Disease Prediction System (May 2025)**
  – Developed ML models using Python, pandas, Scikit-learn (Logistic Regression, Random Forest) to predict disease risk

Achievement

Secured first place in Girls' Cricket Competition, demonstrating teamwork and leadership skills

Certificates

Artificial Intelligence Training Certificate | Python For Data Science | Participation In Hack4Insights
